

# Nexiant Crib.

Controlled Access and Dispensing

Nexiant • 43 Tesla • Irvine, CA 92618 • t: 949.766.9933 f: 949.766.9934

Nexiant Crib interfaces to Nexiant's Smart Inventory Manager (SIM) to control and restrict access to a toolcrib. Once inside, authorized users log the issue or return of items using a handheld scanner.

## How It Works:

1. Type in user ID (swipe card) to unlock door
2. Login to handheld scanner
3. Scan and take items
4. Dock handheld for synchronization
5. Exit crib

## Handheld Solution:

- Easy-to-use barcode solution
- Wireless management of bulky items and MRO supplies inside the toolcrib
- Issue, Return, Check-in/out, Inventory, Transfer, or Restock items
- Inventory reduction through min/max inventory management
- Elimination of paper-based or other manual reordering processes
- Robust reporting capability

## Smart Inventory® Manager

Nexiant's web-hosted Smart Inventory Manager (SIM) enables multi-site inventory control. Real-time inventory visibility allows inventory managers to easily monitor and manage disbursement and replenishment of MRO inventory.

The enterprise integration enabled by the SIM facilitates the exchange of POU transactional data with major ERP/MRP, customized procurement and suppliers' electronic order systems.
